WORKING PAPERS 1. **The Up Side of Being Down: Depression and Analyst Forecast Accuracy**
with Sima Jannati and Sarah Khalaf

Abstract: This paper tests whether financial judgments are improved by mild depression, using earnings forecasts from Estimote. We find that a 1-standard-deviation increase in the segment of the U.S. population with depression leads to a 0.25% increase in future forecast accuracy. This effect is robust to alternative measures and is beyond the influence of seasonal depression or other sentiment measures on decision-making and, economically, compares to other determinants of Estimote users' accuracy. Reduced optimism and slow processing of information are two mechanisms that explain our findings. Overall, we contribute to the literature by linking a mental disorder to financial evaluations.
